## 'SMB Bundle' End of Order Announcement

The Small Medium Business (SMB) Bundle, an option on smaller FortiGate models, will become End-of-Order (EOO) on the Q2 Main Price List effective May 1, 2023.

The SMB bundle had the same FortiGuard services as the long-established Unified Threat Protection (UTP) bundle, with the addition of [FortiGate Cloud](#) for management and analytics of FortiGates and attached FortiAPs, FortiSwitches, and FortiExtenders. We received a lot of feedback that there was confusion about feature differences due to offering too many bundles, and that the value of FortiGate Cloud was being diminished.

### How to order the same functionality without the SMB Bundle

FortiGate Cloud is available as an a-la-carte option for select FortiGate models. To get the same features as the SMB Bundle, choose the appropriate per-device FortiGate UTP Bundle option and add the FortiGate Cloud per-device option (designated by -131- in the part number).

### Simplify management with FortiGate Cloud

FortiGate Cloud delivers a SaaS-based single pane of glass to bring together management and analytics of the Fortinet estate. This is ideal for small and medium-sized businesses and is a key differentiator.

We believe this ability contributed to our top position in the Leader's Quadrant in the [2022 Gartner® Magic Quadrant™ for Network Firewalls](#).
